Code Review:

```
1584 <button
1585   type="button"
1586   id="confirmDeleteBtn"
1587   class="btn btn-primary"
1588   onClick=""
1589 >
1590   Yes, Delete Round
1591 </button>
```

On line 1588 of index.html, the onClick handler is left empty. This is an issue because without a handler, the button does nothing. To fix this, I suggest assigning `onClick="deleteRound(roundId)"` so that the round is properly deleted.

```
76 <li role="menuitem" tabindex="-1">Settings</li>
77 <li role="menuitem" tabindex="-1">About</li>
78 <li role="menuitem" tabindex="-1">Log Out</li>
```

On lines 76, 77, and 78 of index.html, the tabindex for each menu item is set to -1. This is an issue because the menu items will be inaccessible from the keyboard. I suggest setting their tab indexes to 0 to allow the keyboard to focus on them.

```
227 function confirmDelete(roundId) {
228   //TO DO: Present modal dialog prompting user to confirm delete
229   //Return true if user confirms delete, false otherwise
230   let modal = new bootstrap.Modal(
231     document.getElementById("confirmDeleteRoundModal")
```

On lines 228 and 229 of [roundsMode.js](#), there is a leftover 'TO DO' comment. This is an issue because this indicates that the feature is incomplete. I suggest removing the comment.

```

221 * @function confirmDelete
222 * @desc
223 * Present pop-up modal dialog asking user to confirm delete operat
224 * @param roundId -- the unique id of the round to be deleted
225 * @returns -- true if user confirms delete, false otherwise
226 ****
227 function confirmDelete(roundId) {
228     //TO DO: Present modal dialog prompting user to confirm delete
229     //Return true if user confirms delete, false otherwise
230     let modal = new bootstrap.Modal(
231         document.getElementById("confirmDeleteRoundModal")
232     );
233     let confirmBtn = document.getElementById("confirmDeleteBtn");
234     confirmBtn.addEventListener("click", function (event) {
235         event.preventDefault();
236         console.log("deleting round with id " + roundId);
237         for (var i = 0; i < GlobalRoundsTable.rows.length; i++) {
238             let row = GlobalRoundsTable.rows[i];
239             // Check if the id of the row matches the id you're looki
240             if (row.id === "r-" + roundId) {
241                 GlobalRoundsTable.deleteRow(i);
242                 break;
243             }
244         }
245         deleteRound(roundId);
246         localStorage.setItem(
247             GlobalUserData.accountInfo.email,
248             JSON.stringify(GlobalUserData)
249         );
250         GlobalRoundsTableCaption.textContent =
251             "Table displaying " +
252             (GlobalRoundsTable.rows.length - 1) +
253             " speedgolf rounds";
254         modal.hide();
255     });
256     modal.show();
257 }

```

On line 225 of [roundsMode.js](#), a comment states that the confirmDelete function returns true or false depending on the user. This is an issue because the confirmDelete function does not return anything. I suggest removing this comment or adding the proper return statement.

```
415  /*****
416  * @function logRoundForm SUBMIT Handler
417  * @Desc
```

On line 417 of [roundsMode.js](#), the description header is written as '@Desc' but is written as '@desc' elsewhere in the file. This is an issue because the style is inconsistent. I suggest changing this to say '@desc' to conform with the rest of the document.

```
237  for (var i = 0; i < GlobalRoundsTable.rows.length; i++) {
281  for (let i = 0; i < GlobalUserData.rounds.length; ++i) {
```

Lines 237 and 281 of [roundsMode.js](#) create for loops, the first using "var i = 0" and the second using "let i = 0". This is an issue because the written style is inconsistent. I suggest changing line 237 to say "let i = 0".

```

227 function confirmDelete(roundId) {
228     //TO DO: Present modal dialog prompting user to confirm delete
229     //Return true if user confirms delete, false otherwise
230     let modal = new bootstrap.Modal(
231         document.getElementById("confirmDeleteRoundModal")
232     );
233     let confirmBtn = document.getElementById("confirmDeleteBtn");
234     confirmBtn.addEventListener("click", function (event) {
235         event.preventDefault();
236         console.log("deleting round with id " + roundId);
237         for (var i = 0; i < GlobalRoundsTable.rows.length; i++) {
238             let row = GlobalRoundsTable.rows[i];
239             // Check if the id of the row matches the id you're looking for
240             if (row.id === "r-" + roundId) {
241                 GlobalRoundsTable.deleteRow(i);
242                 break;
243             }
244         }
245         deleteRound(roundId);
246         localStorage.setItem(
247             GlobalUserData.accountInfo.email,
248             JSON.stringify(GlobalUserData)
249         );
250         GlobalRoundsTableCaption.textContent =
251             "Table displaying " +
252             (GlobalRoundsTable.rows.length - 1) +
253             " speedgolf rounds";
254         modal.hide();
255     });
256     modal.show();
257 }

```

The confirmDelete function, starting on line 227, does not validate the roundId before using it on line 236, 240, and 245. This is an issue because an invalid ID could lead to errors and the app crashing. I suggest adding an ID validation check at the start of the function.

```

266 function deleteRound(roundId) {
267     GlobalUserData.rounds = GlobalUserData.rounds.filter(function (round) {
268         return round.roundNum !== roundId;
269     });
270 }

```

The deleteRound function, starting on line 266 of roundsMode.js, does not validate the roundId before using it on line 268. This is an issue because an invalid ID could lead to errors and the app crashing. I suggest adding an ID validation check at the start of the function.

Reflection

Comparing my review with my team's collective review led me to recognize the differences between what issues stand out to me and others. I found it easy to pick out stylistic errors and harder to find functional errors. For example, one thing that I found that my team did not find was the inconsistency in the "@desc" and "@Desc" labels for header comments. This does not impact the code's functionality and is a minor error, but it reduces the consistency and professionalism of the code. My team and I noticed the leftover "TO DO" comments throughout the repository, specifically in confirmDelete. These are more serious than the "@desc"/"@Desc" error since they lead reviewers to believe a section is incomplete. One thing I missed which was pointed out by my groupmates was the leftover "console.log" section. This wouldn't impact the user, but it exposes internal data to the browser console and leaves the code seeming unfinished and unsecure.
