

3.3 Exercise: Merge Conflict Scenario

For this assignment, I went through the video and the steps in the assignment to write out the necessary git commands. As a note, Visual Git would not open through the command presented in the video. I instead opened the window through its desktop shortcut and opened the repo through its own GUI.

I followed my written instructions to perform the steps to create the conflict. I noticed that one step said to change `b=20` to `b=20` in the `ab.js` file, which was already the case. I'm not sure if this was a typo or if it was meant to reference the other file.

For conflict resolution, VSCode had its own auto-resolution feature, which required a confirmation to keep the second commit.

Step by step visuals shown below:

In order instructions:

1. `echo let x = 3; > xy.js`
2. `echo let y = 6; >> xy.js`
3. `git add -A`
4. `git commit -m "Added 2 files"`
- 5.
6. `git branch f-pat`
7. `git branch f-kris`
8. `git checkout f-pat`
9. `del ab.js`
10. (in `xy.js` change `x` to `=2`)
11. `git add -A`
12. `git commit -m "Pat Changes"`
- 13.
14. `git checkout f-kris`
15. (in `ab.js` change `b` to `=20`)???
16. `git mv xy.js xz.js`
17. `git add -A`
18. `git commit -m "Kris Changes"`
- 19.
20. `git checkout main`
21. `git merge f-pat`
22. `git merge f-kris`
- 23.
24. `<resolve conflict>`
- 25.
26. `git add -A`
27. `git commit -m "Resolved conflict"`
